“African solutions for Africa”

Technical information and capability

This building system is accredited by the South African National Home Builders Regulations council.

The system uses a “slip form concrete shuttering, using 15 MPa no slump concrete.

Wall thickness ranging from 220mm, 150mm and 110mm.

Standard foundations are required according to soil type.

Double storey homes and condominiums can be built using this system.

Common mixture is 2 wheelbarrows x building sand / aggregate and 2 pockets x cement
